THEHEALIOS.COM

Master Website Bug Report & Development Tickets

Prepared by: Monique Sacks | ms@thefourths.com

Date: 1 April 2026

Website: https://www.thehealios.com

For: Development Team

Total Tickets: 60 (across 15 sections)

This document combines two audits: a live walkthrough review and an independent technical audit of thehealios.com. All bugs, fixes, and change requests are consolidated here into a single master reference for the development team. Each ticket includes the page location, issue description, and the required action. A priority summary is provided at the end.

Section 1 — Homepage: Hero Section

TICKET 001 — Remove 'South Africa's Premium Wellness Brand' text CRITICAL

Location: Homepage > Hero section > eyebrow text above headline
Issue: The eyebrow text reads 'South Africa's Premium Wellness Brand.' Healios is a global brand — this text limits brand positioning internationally.
Action: Remove entirely. Do not replace with anything.

TICKET 002 — Fix hero tagline punctuation — remove em dash MEDIUM

Location: Homepage > Hero section > subheading
Issue: Current text: '...feel your best — every single day.' The em dash is incorrect punctuation.
Action: Replace the em dash with a comma. New text: '...feel your best, every single day.'

TICKET 003 — Fix 'Shop Bestsellers' CTA destination HIGH

Location: Homepage > Hero section > primary CTA button
Issue: Clicking 'Shop Bestsellers' routes to the All Products page, not a dedicated Bestsellers page.
Action: Create a dedicated Bestsellers page if it does not exist and update the CTA link to route there.

Section 2 — Homepage: Trust Bar

TICKET 004 — Make free delivery threshold currency-dynamic HIGH

Location: Homepage > Trust bar > 'Free Delivery — Orders over R600'
Issue: The R600 threshold is hardcoded and does not update when the user switches currency.
Action: Implement real-time dynamic conversion so the threshold displays the correct equivalent in the selected currency. Base value: R600 ZAR.

TICKET 005 — Remove '100% Vegan — Every product' from trust bar CRITICAL

Location: Homepage > Trust bar
Issue: Healios products are NOT 100% vegan. This is factually incorrect and a legal/regulatory risk.
Action: Remove immediately. Audit entire site for any other vegan claims and remove all (see Ticket 013).

TICKET 006 — Replace 'SA Made — Pharma-grade quality' with 'UK Made' CRITICAL

Location: Homepage > Trust bar
Issue: Products are UK-made, not SA-made. Current claim is incorrect.
Action: Replace with 'UK Made' and add the UK flag emoji (🇬🇧). Remove 'Pharma-grade quality' subtext.

TICKET 007 — Remove '30-Day Guarantee — Love it or refund' CRITICAL

Location: Homepage > Trust bar
Issue: Healios does not offer a 30-day guarantee or refund policy. This claim is false.
Action: Remove entirely.

Section 3 — Homepage: Bestsellers

TICKET 008 — Reorder Bestsellers section MEDIUM

Location: Homepage > Bestsellers section
Issue: The current product order in the Bestsellers section is incorrect.
Action: Update display order to: 1. Magnesium Complex 2. Halo Glow 3. Vitamin D3 Gummies 4. Ashwagandha

---

TICKET 009 — Halo Glow: ZAR-only visibility + non-ZAR replacement HIGH

Location: Homepage > Bestsellers section + sitewide product listings
Issue: Halo Glow (Collagen Powder) is only available in South Africa. It must not appear when a user is shopping in any currency other than ZAR.
Action: Add currency-conditional logic — Halo Glow visible only when currency = ZAR. For non-ZAR currencies, replace Halo Glow with Apple Cider Vinegar in the 4th bestseller slot. Ensure Halo Glow is hidden from all listings, search results, and recommendations when currency is non-ZAR.

Section 4 — Homepage: Shop by Category

TICKET 010 — Replace product images with lifestyle images in category cards MEDIUM

Location: Homepage > Shop by Category (Digestive Health & Sleep and Relaxation)
Issue: Category cards show product imagery rather than lifestyle photography. Does not communicate brand positioning.
Action: Replace with lifestyle images. Images to be sourced and supplied separately by the client.

TICKET 011 — Add 'Browse more categories' CTA to category section MEDIUM

Location: Homepage > Shop by Category > bottom right of Sleep and Relaxation card
Issue: No way for users to explore all categories from this section.
Action: Add 'Browse more categories →' CTA at bottom right of the Sleep and Relaxation card, linking to an all-products page organised by category cards. Design to be confirmed with client.

Section 5 — Homepage: Our Philosophy

TICKET 012 — Remove em dash from philosophy tagline MEDIUM

Location: Homepage > Our Philosophy section > headline
Issue: Current: 'Wellness that works — because your health deserves more than a compromise.' Em dash should be removed.
Action: Remove em dash. New text: 'Wellness that works, because your health deserves more than a compromise.' Maintain existing two-tone text styling.

TICKET 013 — Remove '100% Vegan — No animal derived ingredients' card CRITICAL

Location: Homepage > Our Philosophy > claim cards
Issue: Products are not vegan. This card makes a false claim (see also Ticket 005).

Action: Remove card entirely. Audit full site for all vegan claims and remove them.

TICKET 014 — Remove 'Clean Label — No artificial colors or sweeteners' card CRITICAL
Location: Homepage > Our Philosophy > claim cards
Issue: This claim cannot be confirmed as accurate.
Action: Remove card entirely.

Section 6 — Homepage: Footer

TICKET 015 — Fix newsletter subscribe button HIGH
Location: Homepage > Footer > Newsletter signup
Issue: Subscribe button is not clickable. Entering an email and clicking subscribe returns: 'Something went wrong. Please try again.'
Action: Fix the newsletter subscription integration. Must accept valid emails and subscribe users without errors. Fix simultaneously with Tickets 036 and 044.

TICKET 016 — Fix hello@thehealios.com email delivery HIGH
Location: Footer > Contact email
Issue: Emails to hello@thehealios.com are bouncing with delivery failure errors. Was previously forwarding to dn@thefourths.com but is broken.
Action: Fix DNS/MX records or forwarding configuration. Confirm correct forwarding destination with client before implementing.

TICKET 017 — Make 'The Fourths Digital Agency' a clickable link MEDIUM
Location: Homepage > Footer > Copyright line
Issue: Current text: '© 2026 The Healios Health Co. Built by The Fourths Digital Agency' — plain text, not hyperlinked.
Action: Hyperlink 'The Fourths Digital Agency' to www.thefourths.com (opens in new tab). Important SEO backlink.

Section 7 — Product Listing Pages

TICKET 018 — Fix product card click routing (all cards redirect to Halo Glow) CRITICAL

Location: All Products page / any product listing page
Issue: Clicking any product card redirects to the Halo Glow (Collagen Powder) product page regardless of which product was clicked. The small 'Add to cart' icon works correctly — only the full card click/link is broken.
Action: Fix the href on each product card so it dynamically routes to the correct product URL. Likely a template loop issue where a hardcoded URL is used instead of a dynamic product slug.

TICKET 046 — Wrong product name displayed on all product detail pages CRITICAL

Location: /product/* (all product detail pages)
Issue: Every product page renders the title 'Healios Collagen Powder' regardless of which product link was clicked. Breadcrumb and browser tab title are also wrong. All slugs resolve to the first product in the database.
Action: Fix the routing/data-fetching logic so each product page correctly loads and displays the product matching its URL slug.

TICKET 047 — Wrong product image: Collagen Powder shows Halo Glow image CRITICAL

Location: /category/all, Homepage Bestsellers, search results
Issue: The 'Healios Collagen Powder' product card displays the Halo Glow packaging image. Both products appear visually identical in all listings.
Action: Correct the product image assignment in the CMS/database so each product displays its own correct image.

TICKET 048 — 'Subscribe & Save' nav link returns 404 CRITICAL

Location: Main nav > Shop dropdown > Subscribe & Save
Issue: Clicking 'Subscribe & Save' leads to a 404 Page Not Found error. The page does not exist.
Action: Either build the Subscribe & Save page and link it correctly, or remove the nav item until the page is ready.

TICKET 049 — Filter price ranges hardcoded in GBP regardless of selected currency HIGH

Location: /category/all > Filters panel > Price section
Issue: Price filter options always show GBP values even when the user has selected ZAR or another currency.
Action: Make price filter ranges currency-dynamic so they display values in the user's selected currency, updated in real time.

TICKET 050 — 'New In' category page displays no products HIGH

Location: /category/new-in (linked from 'New In' main nav item)
Issue: The Latest Arrivals page renders its heading and subtitle then goes straight to the footer — no products are shown.
Action: Assign products to the 'new-in' category in the CMS, or fix the category filter so products tagged as new correctly appear on this page.

TICKET 051 — No visual feedback when 'Add to Bag' is clicked HIGH

Location: Product detail page > 'Add to Bag' button
Issue: Clicking 'Add to Bag' gives no visual confirmation — no toast notification, no cart badge update, no slide-in drawer, no button state change. Item is silently added.
Action: Implement immediate visual feedback on add-to-cart: toast notification, cart icon badge increment, or slide-in cart drawer.

TICKET 052 — Raw '0' visible on every product card (non-hover state) MEDIUM

Location: All product listing pages and Homepage Bestsellers
Issue: A raw '0' text is visible in the top-right area of every product card image in the default state. Likely an image count/carousel indicator rendering a raw number.
Action: Hide the indicator when count is 0, or ensure it only renders inside the hover-state overlay. Never expose a raw integer to the user.

TICKET 053 — Reviews section displays raw '0' instead of empty state MEDIUM

Location: Product detail page > Reviews accordion
Issue: The Reviews accordion shows a bare '0' when there are no reviews instead of a proper empty state UI.
Action: Add conditional logic: if review count === 0, render a designed empty state (e.g. 'Be the first to leave a review'). Never render the raw integer.

Section 8 — Cart / Basket

TICKET 019 — Remove 'Includes VAT' text from cart CRITICAL

Location: Cart/Basket page > Subtotal line
Issue: Cart shows 'Includes VAT' next to the subtotal. Healios is not VAT registered.
Action: Remove 'Includes VAT' text. Remove all VAT references sitewide (see Tickets 028 and 029).

Section 9 — Checkout

TICKET 020 — Add address type selector before shipping address fields HIGH

Location: Checkout > Shipping address section
Issue: No way to differentiate between residential and business delivery, which affects how the address should be structured.
Action: Add a toggle/selector: 'Are you delivering to a residential or business address?' Answer dynamically adjusts address fields shown.

TICKET 021 — Split phone number into dialing code + number fields HIGH

Location: Checkout > Customer details > Phone number field
Issue: Single field with no country dialing code selector.
Action: Replace with two side-by-side fields: (1) Country dialing code dropdown listing ALL countries, defaulting to the country matching the selected currency but fully changeable; (2) Phone number input for remaining digits. Leading 0 of local number should be omitted (e.g. SA +27 then 826914852).

TICKET 022 — Fix street address field — spaces not working HIGH

Location: Checkout > Shipping address > Street address field
Issue: Users cannot enter a space between the street number and street name (e.g. '123 Healios Street' cannot be typed correctly).
Action: Fix the input field to allow full address strings including spaces.

TICKET 023 — Add optional 'Business name / Complex name' field MEDIUM

Location: Checkout > Shipping address
Issue: No field for users to enter a business name or complex/building name for delivery.
Action: Add optional text field labelled 'Business name / Complex name (optional)' above Address Line 1.

TICKET 024 — Add second address line field MEDIUM

Location: Checkout > Shipping address
Issue: Only one address line exists, which is insufficient for longer or more complex addresses.
Action: Add optional Address Line 2 field below Address Line 1.

TICKET 025 — Add adaptive province/county/state field HIGH

Location: Checkout > Shipping address
Issue: No province/county/state field exists in the shipping address form.
Action: Add a field with a label that adapts per country: South Africa = 'Province', UK = 'County', Canada = 'Province', USA = 'State', others = appropriate local term. Suggest options based on selected country and city where possible.

TICKET 026 — Implement adaptive postal code validation HIGH

Location: Checkout > Shipping address > Postal code field

Issue: Different countries use very different postal code formats (SA = 4-digit numeric; UK = alphanumeric e.g. SW1A 1AA; Canada = alphanumeric e.g. M5V 2T6).
Action: Implement country-aware validation and format hints. Auto-suggest based on city/province where possible. Users must ALWAYS be able to manually edit — never lock the field. Show a format hint below the field.

TICKET 054 — Fix checkout pre-filling wrong country and postcode CRITICAL

Location: Checkout > Shipping address
Issue: The Country field defaults to 'United Kingdom' and Postcode pre-fills with 'SW1A 1AA' (a London postcode). Wrong for a ZAR-default South African storefront.
Action: Remove hardcoded UK defaults. Country and postcode fields should be blank on load, or default to South Africa when currency is ZAR.

TICKET 027 — Remove bullet points from shipping option descriptions MEDIUM

Location: Checkout > Shipping method selection
Issue: Shipping details (e.g. 'Free', '3-5 business days', 'R39') are preceded by bullet point dots which looks unprofessional.
Action: Remove all bullet point characters from shipping option detail text. Text should display cleanly.

TICKET 028 — Remove VAT 20% line from payment summary CRITICAL

Location: Checkout > Payment section > Order summary
Issue: Shows 'VAT 20% included.' Healios is not VAT registered, and 20% is the UK VAT rate — SA rate is 15%.
Action: Remove the VAT line from the payment summary entirely. Do not display any VAT amount until the company is legally VAT registered.

TICKET 029 — Remove 'All prices include VAT' text CRITICAL

Location: Checkout > Payment section
Issue: A line reads 'All prices include VAT.' This is incorrect — Healios is not VAT registered.
Action: Remove this text completely. Can be reinstated when/if Healios becomes VAT registered.

TICKET 030 — Redesign Stripe trust badge MEDIUM

Location: Checkout > Payment section
Issue: The 'Secure checkout powered by Stripe' section looks generic and does not inspire customer confidence.
Action: Redesign using official Stripe badge/logo, padlock iconography, and credible trust copy. Reference leading e-commerce sites for best practice.

TICKET 031 — Remove bullet point from 'Pay with Stripe' button MEDIUM

Location: Checkout > Payment section > Pay with Stripe button
Issue: An erroneous bullet point or dot character appears between 'Pay with Stripe' and the order amount (e.g. 'Pay with Stripe • R2,259.40').
Action: Remove the dot. Button should read cleanly e.g. 'Pay with Stripe R2,259.40'.

Section 10 — Stripe Payment Page

TICKET 032 — Update Stripe merchant name CRITICAL
Location: Stripe payment page
Issue: Merchant name shows as 'The Healios' only.
Action: Update Stripe account display name to 'The Healios PTY Limited'.

TICKET 033 — Prevent shipping address being re-requested on Stripe HIGH
Location: Stripe payment page
Issue: Stripe re-requests the shipping address the user already entered on the Healios checkout page, forcing double data entry.
Action: Pass the shipping address through to the Stripe payment session so it pre-populates and the user does not need to re-enter it.

Section 11 — Order Confirmation Page

TICKET 034 — Implement proper order number format HIGH
Location: Order confirmation page > Order reference
Issue: Order reference displays a Stripe session ID (e.g. 'cs_test_b...') which is not customer-friendly.
Action: Generate a clean sequential order number on order creation. Suggested format: HLS-YYYYMMDD-XXXX (e.g. HLS-20260401-0001). Retain Stripe session ID internally for reconciliation only.

TICKET 035 — Display actual customer email on confirmation page HIGH
Location: Order confirmation page > 'Confirmation sent to [email]'
Issue: Displays placeholder '[your email]' instead of the customer's actual email address.
Action: Pull the customer email from order/session data and display it dynamically.

TICKET 036 — Fix 'Stay in the loop' subscribe section on confirmation page HIGH
Location: Order confirmation page > Newsletter section
Issue: Subscribe form throws 'Something went wrong. Try again.' error.
Action: Fix the subscription integration. Same root issue as Ticket 015 — fix both simultaneously.

Section 12 — Navigation & Responsiveness

TICKET 037 — Fix nav bar functionality loss on narrow/mobile screens HIGH

Location: Nav bar > all screen sizes below full-width desktop
Issue: When the browser is narrowed or on mobile, the following disappear entirely: currency switcher, wishlist/favourites icon, account login icon. Only search and basket icons remain.
Action: Ensure all nav functionality is accessible at all screen sizes. Collapse missing items into a hamburger/overflow menu on smaller screens. Include account, wishlist, and currency in the mobile nav. Test across breakpoints: 320px, 375px, 414px, 768px.

TICKET 055 — Wellness Quiz 'Next' button hidden below the fold MEDIUM

Location: /wellness-quiz
Issue: On standard viewport heights (768px–800px), the 'Next' button sits below all 6 answer options and is not visible without scrolling. No scroll indicator is shown. After selecting an answer, the quiz does not auto-scroll to the button.
Action: Either make the Next button sticky/always visible within the viewport, or auto-scroll to it after an answer is selected.

TICKET 056 — Wellness quiz does not scroll to top when advancing questions MEDIUM

Location: /wellness-quiz > between questions
Issue: Clicking Next does not scroll to the top of the next question. Users land mid-page, missing the question heading and progress indicator.
Action: On question transition, scroll to top of the page or the question container element.

Section 13 — User Account

TICKET 038 — Fix 'Member since' date display MEDIUM

Location: Account > Overview > Account information
Issue: 'Member since' field is blank or incorrect.
Action: Pull the account creation timestamp from the database and display as a human-readable date (e.g. 'Member since 1 April 2026').

TICKET 039 — Fix order history not populating in account HIGH

Location: Account > Orders
Issue: Orders placed under the account email are not appearing in order history. Shows 'You haven't got any orders yet' even after a successful order.
Action: Ensure orders placed with a matching email address are linked to and displayed in that account's order history. Investigate how Stripe orders are stored and associated with user accounts post-payment.

TICKET 040 — Auto-populate account addresses from checkout history MEDIUM

Location: Account > Addresses
Issue: Addresses section is empty even when the user has previously used a shipping address during checkout.

Action: Automatically save the shipping address used during each order to the customer's account address book.

TICKET 041 — Add logout functionality to account CRITICAL

Location: Account > Navigation / dropdown

Issue: There is no logout option anywhere on the site. Once logged in, a user has no way to log out of their account. Critical UX and security issue.

Action: Add a clearly visible 'Log out' option in the account dropdown (nav bar) and within the account pages (sidebar or overview page).

TICKET 057 — Login page testimonial references London (wrong market) MEDIUM

Location: /auth (Login page) > left panel testimonial

Issue: The customer testimonial reads '— Sarah M., London.' For a brand selling primarily in South Africa, this is inconsistent.

Action: Update the testimonial to reference a South African city (e.g. Cape Town or Johannesburg), or remove the location.

Section 14 — Sitewide Issues

TICKET 042 — Remove all erroneous bullet points from headings and nav items CRITICAL

Location: Sitewide — observed in Shop nav, New In, category headings, and throughout

Issue: Bullet point dots (•) are appearing before section headings, navigation items, and clickable links throughout the site. Looks highly unprofessional.

Action: Audit the full site. Remove all instances. Likely a CSS issue — apply global fix: ul, ol { list-style: none; } on affected components. Review all nav and heading elements.

TICKET 043 — Fix order confirmation email not sending CRITICAL

Location: Post-checkout / order confirmation flow

Issue: No order confirmation email is sent to the customer after placing an order. Customer lands on the confirmation page but receives no email.

Action: Implement transactional email triggered on order completion. Must include: order number (HLS format per Ticket 034), itemised order summary, shipping address, expected delivery timeframe, and support contact (hello@thehealios.com). Send to the customer's actual email address.

TICKET 044 — Fix newsletter confirmation email not sending HIGH

Location: Newsletter signup (Footer + Order confirmation page)

Issue: No confirmation email is sent when a user subscribes to the newsletter. Required for GDPR/POPIA compliance (double opt-in).

Action: Implement subscription confirmation email sent immediately on sign-up. Include unsubscribe link. Fix simultaneously with Tickets 015 and 036.

TICKET 058 — Email popup fires immediately on first page load MEDIUM

Location: Homepage (fires on every first visit)
Issue: The 'Get 10% Off Your First Order' email capture popup fires immediately on page load before the user has had any time to browse.
Action: Add a delay (8–10 seconds) before the popup triggers, or switch to an exit-intent trigger. Ensure it does not re-fire within the same session after being dismissed.

TICKET 059 — Favourites panel shows no sign-in prompt for logged-out users MEDIUM

Location: Favourites icon (heart) in header > slide-out panel
Issue: Logged-out users can open the Favourites panel but there is no prompt to sign in or create an account. Saved items will be lost when the session ends with no warning.
Action: Add a 'Sign in to save your favourites permanently' CTA/banner inside the Favourites panel for non-authenticated users.

TICKET 060 — FAQ category count missing space LOW

Location: /faq > left sidebar category list
Issue: 'Products & Ingredients' renders without a space between the label and its item count.
Action: Add a space or wrap the count in a separate styled span element.

Section 15 — Wellness Drive

TICKET 045 — Set Wellness Journal to 'Coming Soon' MEDIUM

Location: Wellness Drive > Navigation dropdown > Wellness Journal
Issue: The Wellness Journal is listed in the nav but has not been built and has no content strategy in place.
Action: Update to a 'Coming Soon' state: remove 'Explore now' CTA, replace with 'Coming Soon' label/badge. If the link is still clickable, show a simple teaser landing state with no content — just intrigue.

Priority Summary

Priority	Description	Ticket Numbers
CRITICAL	Fix immediately — live site integrity, legal, or trust issues	001, 005, 006, 007, 013, 014, 018, 019, 028, 029, 032, 041, 042, 043, 046, 047, 048, 054
HIGH	Significant UX or functionality issues	003, 004, 009, 015, 016, 020, 021, 022, 025, 026, 033, 034, 035, 036, 037, 039, 044, 049, 050, 051
MEDIUM	UX improvements and enhancements	002, 008, 010, 011, 012, 017, 023, 024, 027, 030, 031, 038, 040, 045, 052, 053, 055, 056, 057, 058, 059
LOW	Polish / minor cosmetic fixes	060
